# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:**

#### **Eureka Weather:**

A warm front will clip the north coast this weekend with some drizzle this morning and again tonight while more sunshine and warmer temperatures can be expected farther south. The forecast area can expect noticeably warmer and dry weather as high pressure returns early next week.

#### **San Francisco Weather:**

Today will be partly cloudy with seasonable temperatures. By Sunday, high pressure will strengthen with a noted warming trend continuing through Monday and Tuesday across the Bay Area and Central Coast. Temperatures will return to seasonable values Wednesday through Friday as onshore winds return but dry weather continues.

### **CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY**

#### **Sacramento Weather:**

High pressure moving over the western U.S. will bring fair skies and well above normal temperatures through most of the week. A weak Pacific low pressure system may break down the west coast ridge enough to bring a threat of showers to the mountains by the end of next week.

#### **Hanford Weather:**

High pressure will build over the Central Interior for the weekend and provide for a warming and drying trend.

## **WEATHER SYNOPSIS BY REGION: (Con't)**

### **SOUTHERN CALIFORNIA:**

#### **Los Angeles Weather:**

A building upper high will bring slight warming to the region today with more significant warming on Sunday. Offshore flow will cause additional strong warming on Monday with temperatures well above normal. Very warm to hot weather is expected Tuesday, then a cooling trend is expected Wednesday through Friday as an upper low approaches the West Coast and eventually moves just south of the region.

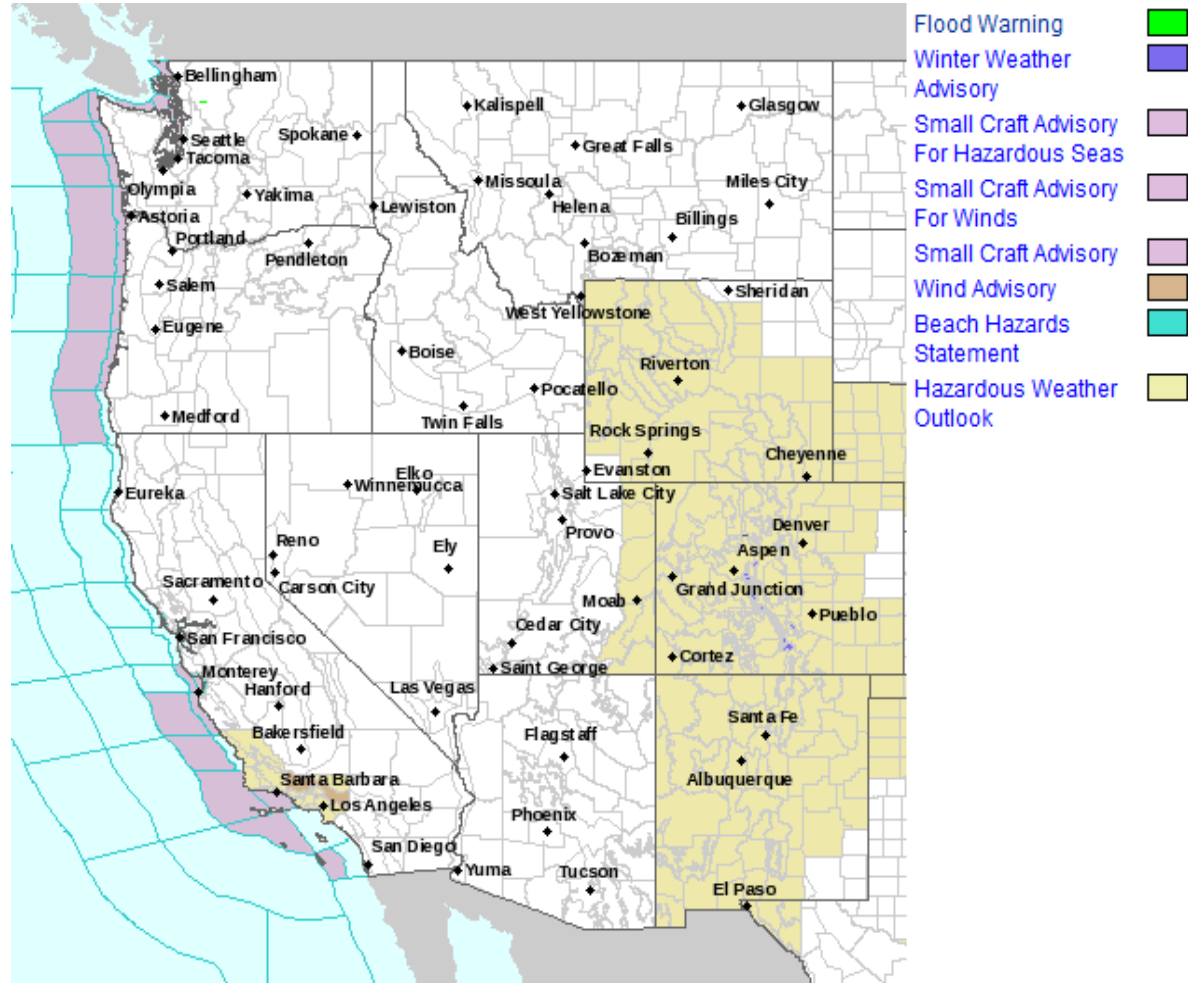

#### **Extreme Southwestern California Including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:**

A weak trough of low pressure moving inland through California will bring scattered light showers to southwestern San Diego County early this morning. Otherwise, high pressure aloft will strengthen near the West Coast through Tuesday bringing dry weather and a warming trend. Temperatures will be gradually cooler for Thursday through Saturday as a weak trough of low pressure moves towards and inland along the West Coast.

#### **Southeast California Weather:**

Another fast moving weather disturbance will progress across the region today keeping temperatures below normal and clearing skies late in the afternoon. Strong pressure will build into the southwest early next week with a gradual warming to above normal levels continuing though at least the middle of next week.

# Situational Summary – 2014 Drought

Information as of 4/4/14

On January 17, 2014 Governor Edmund G. Brown proclaimed a State of Emergency and directed state officials to take all necessary actions to prepare for drought conditions. The State Operation Center (SOC) is activated to implement objectives in support of the Governor's priorities. The lack of winter rain and snowfall has resulted in extremely dry conditions in many parts of the State. Reservoir levels are down significantly from where they should be on average for this time of year. If conditions continue without substantial rainfall, severe impacts to municipal water supplies, agriculture (plants and livestock) and firefighting capabilities are likely in store for the State over the next few months. Negative economic impacts will also result.

Another storm moved across Northern California on Monday and Tuesday, with low-pressure conditions creating additional storms through Wednesday. Storms will move east beyond California between Wednesday and Friday as a high pressure, dry system builds over the region.

As our state's rainy season nears its end, much of California has received only about half of normal precipitation for this rainy season. Heavy rain and snow would have to fall throughout California most days in April to reach average annual rain and snowfall levels, which is highly unlikely. Even with such precipitation, California would remain in drought conditions, due to low water supplies in reservoirs from the two previous dry years.

The drought could result in severe impacts to the municipal water supplies, wells, agriculture (plants and livestock) and firefighting capabilities for several months. The SOC continues to be activated to monitor the situation statewide, and support regional and local operational areas.

# Situational Summary – 2014 Drought (Cont.)

Information as of 4/4/14

- The Taskforce continues to meet regularly to take actions that conserve water and coordinate state response to the drought.
- The most recent snowpack survey, conducted on February 27, recorded California snowpack at 24% of normal. The next snowpack survey will be conducted April 1. A more recent update using automated devices shows snowpack at 29% of normal as of March 30.
- DWR has announced that water essential for health and safety will be delivered through the state water project in spite of the zero allocation policy. Deliveries will be boosted if storms produce enough rain and snow to increase reservoir storage and the snow pack.
- Cal OES continues to gather drought-related costs from state agencies and local governments.

## Current Drought Updates:

- 2014 Drought Response Report will be updated again on 04/07/14 unless the situation warrants.
